Research Summary

Edge computing servers are specialized hardware or virtual machines deployed at the edge of a network, closer to the data source or end-users, to process and analyze data locally. These servers facilitate edge computing, which is a decentralized computing model designed to reduce latency and improve the efficiency of data processing and real-time decision-making. Edge computing servers are strategically placed to handle data generated by IoT devices, sensors, or end-users, allowing for faster response times, reduced network congestion, and improved data security. They play a critical role in various applications such as autonomous vehicles, industrial automation, smart cities, and remote or mobile environments, ensuring that data is processed and acted upon as close to the source as possible, enhancing overall system performance.

The major global suppliers of Edge Computing Servers include Dell, HPE, Lenovo, Cisco, Nokia, Gigabyte Technology, Huawei, Fujitsu, ADLINK, Atos, Advantech, Sugon, Inspur, OnLogic, Trusme, etc. The global players competition landscape in this report is divided into three tiers.
