Research Summary

An edge server is a computing device or server located at the edge of a network, closer to the end-users or IoT (Internet of Things) devices, rather than residing in a centralized data center or cloud environment. It serves as an intermediary point for processing, caching, and optimizing data and content locally, reducing latency and improving the performance of services for users. Edge servers are integral components of edge computing architectures, allowing for real-time data processing and content delivery while supporting applications such as content delivery networks (CDNs), IoT, and low-latency services, making them particularly beneficial for use cases where rapid data analysis and response times are critical.

The major global manufacturers of Edge Server include Dell, HPE, Lenovo, Nokia, Cisco, Huawei, Gigabyte Technology, Fujitsu, ADLINK, Atos, Advantech, Inspur, Sugon, OnLogic, Trusme, etc. The global players competition landscape in this report is divided into three tiers.
