Research Summary

Edible alcohol, also known as ethyl alcohol or ethanol, is a type of alcohol that is safe for human consumption in regulated quantities. It is the primary alcohol used in alcoholic beverages such as beer, wine, and spirits, and is typically derived from fermented grains, fruits, or vegetables. Ethanol is metabolized by the body to provide energy, although excessive consumption can lead to intoxication and various health risks. In addition to its use in beverages, edible alcohol is also used as a solvent in food products, flavorings, and extracts, such as vanilla extract or food-grade perfumes. Unlike industrial alcohols, which may contain toxic substances, edible alcohol is purified to meet specific safety standards for consumption. It is also used in some pharmaceutical preparations and medicinal tinctures, where it serves as a carrier for active ingredients. While ethanol is generally safe when consumed in moderation, it is regulated by food safety authorities to ensure its purity and safety for human use.

The major global manufacturers of Edible Alcohol include SDIC JILIN, Cargill, Hongzhan Group, ADM, Jilin Province New Tianlong Industry, COFCO, Jiangsu Huating
