### Research Summary

Electric Double-Layer Capacitors (EDLC), often referred to as supercapacitors or ultracapacitors, are energy storage devices that store electrical energy via electrostatic charge separation at the interface between an electrolyte and a high-surface-area electrode material. Unlike traditional electrochemical batteries, EDLCs do not rely on chemical reactions for energy storage, allowing them to deliver rapid charge and discharge cycles and exhibit exceptional power density. These devices are used in various applications, such as regenerative braking systems in hybrid vehicles, energy storage in renewable energy systems, and as backup power sources in electronics, due to their ability to store and release energy quickly and reliably, making them ideal for high-power and short-term energy storage needs.

The major global manufacturers of EDLC include Maxwell, Panasonic, Ningbo CRR New Energy Technology, LS Mtron, Nippon Chemi-Con, AVX, Supreme Power Solutions, ELNA, KEMET, Samwha, Jianghai Capacitor, Man Yue Technology Holdings Limited (Samxon), Ioxus, Jinzhou Kaimei Power, Beijing HCC Energy, Skeleton Technologies, VINATech, Cornell Dubilier Electronics, Shanghai Aowei Technology,

Yunasko, Shandong Goldencell Electronics Technology, CAP-XX, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
