Research Summary

EDM slow wire, also known as Wire EDM (Electrical Discharge Machining), is a precision machining process that utilizes a thin, electrically conductive wire as an electrode to cut and shape conductive materials, primarily metals, with exceptional precision. Unlike conventional EDM where sparking discharges erode the workpiece, EDM slow wire involves a continuous and slow feed of the wire, typically made of brass or other conductive materials, to create intricate cuts or contours in the workpiece. The process relies on a controlled electrical discharge that generates intense heat, melting and removing small portions of the material without physical contact, resulting in fine, intricate cuts and the ability to produce complex shapes with very tight tolerances. Wire EDM is extensively used in the manufacturing industry for applications requiring high precision, such as aerospace components, injection molds, and intricate tooling.

The major global manufacturers of EDM Slow Wire include Powerway Group, Oki Electric Cable, OPECMAC Inc., THERMOCOMPACT, Hitachi Metals, Sumitomo (SEI) Steel Wire Corp., J.G. Dahmen & Co KG, Senor Metals, Tamra Dhatu, YUANG HSIAN

METAL INDUSTRIAL, Heinrich Stamm GmbH, etc. The global players competition landscape in this report is divided into three tiers.
