Research Summary

EEG-EMG equipment combines Electroencephalography (EEG) and Electromyography (EMG) technologies in a single system to simultaneously monitor and record both the electrical activity of the brain and the electrical activity of muscles. EEG measures the brain's electrical signals, providing insights into brain function and activity, while EMG captures the electrical impulses produced by muscle contractions, enabling the analysis of muscle movements and activity. This integrated equipment is often used in clinical and research settings to study conditions like sleep disorders or during neurology assessments to better understand the relationship between brain activity and muscle function. Simultaneously recording EEG and EMG data can provide a more comprehensive view of a patient's physiological state and aid in the diagnosis and treatment of various neurological and neuromuscular disorders.

The major global manufacturers of EEG-EMG Equipment include Nihon Kohden, Natus, Medtronic, Masimo, Micromed, Neurosoft, Cadwell, EGI, NCC, Compumedics, Neuracle, Syntop, Medcom Technology, Poseidon Medical, Million, CONTEC, Solar
