Research Summary

EEG equipment, short for Electroencephalography equipment, refers to specialized technology and instruments used to measure and record the electrical activity of the brain. This equipment typically includes an array of electrodes or sensors that are placed on the scalp to detect and record the brain's electrical signals. EEG is a non-invasive technique used in medical and research settings to monitor brain function, diagnose neurological disorders, and study brain activity patterns, such as those associated with epilepsy, sleep disorders, or cognitive research. The EEG equipment amplifies, filters, and digitizes the signals from these electrodes, creating a graphical representation known as an electroencephalogram, which is crucial in the assessment of brain health and research into brain-related phenomena.

The major global manufacturers of EEG Equipment include Nihon Kohden, Natus Medical, Medtronic (Covidien), Compumedics, Micromed, Cadwell, EGI, NCC Medical, SYMTOP, NEUROWERK, etc. The global players competition landscape in this report is divided into three tiers.
