### Research Summary

Effect pigments, often referred to as special effect pigments or pearlescent pigments, are a type of colorant used in various industries, including cosmetics, automotive coatings, and the manufacturing of plastics and inks. Unlike conventional pigments that create colors through absorption and reflection of light, effect pigments produce unique optical effects, such as shimmer, luster, and color shifts, by altering the way light interacts with their microscopic layers or structures. Effect pigments are typically composed of materials like mica, silica, or titanium dioxide coated with thin layers of metal oxides, interference pigments, or transparent dyes, which create the distinctive visual effects when light reflects and refracts off their surfaces. These pigments are prized for their ability to add depth and dimension to products, enhancing their visual appeal and making them ideal for applications where a captivating appearance is desired.

The major global manufacturers of Effect Pigments include Altana, BASF, Toyo Aluminium, Merck, Silberline, Schlenk, Sun Chemical, Sudarshan, CQV, Cristal, GEO
