Research Summary

Elastomeric infusion pumps are medical devices designed for the controlled and continuous delivery of fluids or medications to a patient over a predetermined period. These pumps consist of an elastomeric reservoir or balloon that can be filled with the prescribed medication, and an associated delivery mechanism. As the elastomeric balloon slowly contracts, it exerts pressure on the medication, forcing it to flow through a connected infusion set and into the patient's body. Elastomeric infusion pumps are known for their simplicity, portability, and accuracy in delivering a wide range of medications, making them particularly suitable for ambulatory and home care settings where patients need a reliable and self-administered means of medication delivery over extended periods.

The major global manufacturers of Elastomeric Infusion Pumps include Nipro, B. Braun, Avanos Medical, Woo Young Medical, Baxter, Leventon, Coopdech, Ambu, ACE Medical, S&S Med, etc. The global players competition landscape in this report is divided into three tiers.
