Research Summary

Electric aircraft tugs are specialized vehicles designed to move and tow airplanes, particularly in small to medium-sized aircraft operations. These tugs are equipped with electric motors and are often battery-powered, providing a clean and efficient means of maneuvering aircraft on the ground. Electric aircraft tugs are built with the necessary power and torque to safely and precisely tow planes to and from hangars, runways, or other designated areas, eliminating the need for manual pushing or conventional tow vehicles. They contribute to reduced operational costs, environmental benefits, and improved maneuverability, making them a popular choice for aviation facilities seeking efficient and sustainable ground handling solutions.
