Research Summary

An electric brake booster, also known as an electric brake assist system, is an automotive component designed to enhance braking performance by providing additional power assistance to the brake pedal. Unlike traditional vacuum-based brake boosters, electric brake boosters use an electric motor to generate the needed force to aid in brake application. These systems are particularly useful in modern vehicles with advanced safety and driver-assistance features, as they can quickly adapt to changing driving conditions and offer more precise control over braking. Electric brake boosters contribute to improved safety, responsiveness, and overall braking efficiency in a wide range of vehicles, enhancing driver confidence and helping prevent accidents by reducing stopping distances and providing consistent brake pedal feel.

The major global manufacturers of Electric Brake Booster include Bosch, Continental, ZF, Hitachi, WBTL, Tongyu Automotive, Trinov, NASN Automotive, etc. The global players competition landscape in this report is divided into three tiers.
