Research Summary

An electric condensate pump is a compact, electrical device commonly used in heating, ventilation, and air conditioning (HVAC) systems to efficiently remove condensed water produced during the cooling or heating process. These pumps are designed to transport this condensate water from areas such as air handler units, furnaces, or dehumidifiers to a drainage system, preventing potential water damage and maintaining the overall efficiency of the HVAC system. Electric condensate pumps typically consist of a reservoir or tank, a float switch or sensor to detect the water level, and an electric pump that activates when the water reaches a certain level, pumping the accumulated condensate to a suitable disposal location. These pumps are particularly valuable in situations where gravity drainage is not feasible, allowing for the reliable removal of condensed water in a wide range of HVAC applications.

The major global manufacturers of Electric Condensate Pump include Little Giant, Hartell, Sauermann, Shipco Pumps, DiversiTech, Pentair, Zoeller, Liberty, Aspen Pump, Grundfos, Beckett, Wayne, Saniflo, Crane Pumps & Systems, Armstrong International,
