Research Summary

An electric furnace transformer, often referred to as a furnace transformer, is a specialized electrical transformer used in electric arc furnaces and other high-power industrial heating systems. Its primary function is to convert high-voltage electrical power from the utility grid into lower voltage levels suitable for the electric furnace's operation. Electric arc furnaces rely on electric arcs to melt and process metal materials, and these transformers play a crucial role in providing the intense power required for this purpose. They typically step down high voltage to the lower voltage required for the furnace, while also isolating and protecting the furnace from potential electrical disturbances. These transformers are a vital component in the steelmaking and metalworking industry, facilitating efficient and precise heating processes in large-scale industrial applications.

The major global manufacturers of Electric Furnace Transformer include Siemens, Sanding, GE, ABB, China XD Electric, Tamini, Uralelectrotyazhmash, TEBA, Electrotherm, Shenda, Kitashiba Electric, Hyundai, Liuzhou Special Transformers,
