Research Summary

Electric fuses are protective devices used in electrical circuits to safeguard against excessive current, preventing damage to equipment, fire, or electrical hazards. These devices are designed to interrupt the flow of electricity when the current exceeds a specified safe level, commonly due to short circuits, overloads, or faults in the system. Electric fuses consist of a heat-sensitive element, often made of a fusible material like wire or a metallic strip, which melts when the current surpasses a predefined rating, causing an open circuit and effectively disconnecting the power source from the load. Fuses are available in various types, including cartridge fuses and plug fuses, and are an integral part of electrical safety, ensuring that circuits are protected and limiting the potential for electrical accidents and damage to electrical equipment.

The major global manufacturers of Electric Fuses include Littelfuse, Legrand, Mersen, WalterFuse, Sinofuse Electric, Eaton, Schurter, Siemens, CONQUER ELECTRONICS, ABB, Bel Fuse, Hollyland, Betterfuse, AEM, TA I TECHNOLOGY, etc. The global players competition landscape in this report is divided into three tiers.
