Research Summary

An electric motor core, often referred to as the motor's core or stator core, is a crucial component in an electric motor's construction. It is typically a stationary, cylindrical or stack of laminated iron or steel sheets that serves as the stationary part of the motor around which the rotor (the rotating part) turns. The core's primary role is to provide a path for the magnetic field produced by the motor's coils (windings), facilitating the interaction between the magnetic fields of the stator and the rotor, which generates the rotational motion. The laminated construction minimizes energy loss due to eddy currents, improving the motor's efficiency. The design and quality of the motor core significantly impact the motor's performance, efficiency, and overall functionality, making it a critical element in electric motor technology.

The major global manufacturers of Electric Motor Core include Mitsui High-tec, EuroGroup Laminations, Suzhou Fine-Stamping Machinery & Technology, POSCO Mobility Solution, R.bourgeois, Xinzhi Group Co Ltd, Wuxi Longsheng Technology, Tempel Steel, Jiangyin Huaxin Precision Technology Corporation, Jiangsu Lianbo
