Research Summary

An electric parking brake (EPB) is an advanced automotive braking system that replaces the traditional handbrake or foot-operated parking brake with an electronically controlled mechanism. Instead of using a physical lever or pedal to engage the parking brake, the driver activates the EPB with the push of a button or switch. This system relies on electric motors to actuate the brake calipers or pads, effectively applying or releasing the parking brake. EPBs offer several advantages, including automated hill-hold features, improved safety, and space-saving design, as they eliminate the need for a mechanical handbrake lever in the vehicle's interior. They are commonly found in modern vehicles, enhancing convenience and safety for drivers.

The major global manufacturers of Electric Parking Brake include ZF, Continental, Chassis Brakes International, Aisin, K?ster, Mando, Hyundai Mobis, Zhejiang Libang Hexin, Wuhu Bethel Automotive, Advics (Aisin), Huayu Automotive Systems, Hitachi Astemo, etc. The global players competition landscape in this report is divided into three tiers.
