Research Summary

An Electric Parking Brake System (EPBS) is an innovative automotive braking technology that replaces the conventional handbrake or foot-operated parking brake with an electronically controlled mechanism. This system utilizes electric motors to apply and release the parking brake, often through a button or switch in the vehicle's interior. The EPBS not only simplifies the operation of the parking brake but also provides several practical advantages, such as automatic hill-hold functionality, improved safety through features like automatic release during acceleration, and space-saving design, as it eliminates the need for a traditional handbrake lever. Electric parking brake systems are commonly integrated into modern vehicles, enhancing convenience, safety, and interior design flexibility.

The major global manufacturers of Electric Parking Brake System include ZF TRW, Continental, K?ster, Dura, Mando, AISIN, Hyundai Mobis, Zhejiang Libang Hexin, Wuhu Bethel, etc. The global players competition landscape in this report is divided into three tiers.
