### Research Summary

An electric submersible pump is a specialized piece of equipment designed for the efficient lifting and transportation of liquids, typically water or oil, from deep wells, boreholes, or other submerged sources. This pump is entirely submerged in the fluid it's meant to pump, with an electric motor and impeller housed in a watertight enclosure. When activated, the electric motor spins the impeller, creating a flow of liquid that is forced to the surface through a discharge pipe. Electric submersible pumps are widely used in applications like groundwater extraction, oil drilling, and wastewater management due to their effectiveness, reliability, and ability to handle high volumes of liquid from significant depths.

The major global manufacturers of Electric Submersible Pump include Schlumberger, Borets Company, General Electric, Halliburton, GE (Baker Hughes), Canadian Advanced ESP, Lvpai, Lishen Pump, Shengli Pump, etc. The global players competition landscape in this report is divided into three tiers.
