Research Summary

An Electrical House, commonly referred to as an E-House, is a prefabricated and self-contained enclosure that houses electrical equipment and systems for various industrial and infrastructure applications. These modular structures are designed to accommodate a wide range of electrical and automation components, such as switchgear, transformers, control panels, and other equipment, often in a climate-controlled environment. E-Houses are typically used in sectors like power generation, oil and gas, mining, and manufacturing, where the need for rapid deployment, reduced on-site construction, and centralized control of electrical systems is crucial. They provide a cost-effective and efficient solution for housing critical electrical infrastructure, ensuring operational reliability, and streamlining project execution.
