Research Summary

Electrically insulated bearings, often referred to as insulated or insulated bearings, are a specialized type of rolling bearings designed with an insulating layer to prevent electrical current from passing through the bearing and damaging it or the equipment it's a part of. This insulating layer is typically made of ceramic materials, such as alumina or silicon nitride, and is inserted between the inner and outer rings of the bearing. Electrically insulated bearings are commonly used in electric motors and generators, where they protect against electrical damage, such as bearing fluting or electrical discharge damage, which can occur due to stray electrical currents in the system. These bearings ensure the reliable and long-lasting operation of machinery and equipment in applications where electrical insulation is critical.

The major global manufacturers of Electrically Insulated Bearings include SKF, Schaeffler Group, NSK, NTN, JTEKT, TIMKEN, NACHI, LYC Bearing, NKE, ZWZ, LYRA BEARING, JIUXING, Lily Bearing, BTC Engineering, IKL BEARING, etc. The global players competition landscape in this report is divided into three tiers.
