Research Summary

An electro-mechanical brake (EMB) system is an advanced braking technology that uses electrical energy to directly actuate mechanical components, eliminating the need for hydraulic systems. This system relies on electric motors, actuators, and sensors to generate braking force, providing precise and responsive control. The EMB system operates by converting electrical signals from the brake pedal or electronic control unit into mechanical force, which is applied to the brake pads or shoes. Its compact design reduces weight and complexity, offering benefits like improved energy efficiency, faster response times, and easier integration with advanced driver-assistance systems (ADAS) and autonomous vehicles. EMB systems are increasingly used in modern automotive and aerospace applications for their reliability, reduced maintenance requirements, and enhanced braking performance.

The major global manufacturers of Electro-Mechanical Brake (EMB) System include Brembo, Haldex VIE, Exquisite Automotive Systems, HL Mando, Jiongyi Electronic,
