Research Summary

An electro-mechanical brake is a braking system that combines both electrical and mechanical components to control and modulate the stopping or slowing down of a vehicle or machinery. It typically includes an electric motor, a mechanical braking mechanism, and a control system. When activated, the electric motor generates force to apply the mechanical brake, which can be in the form of friction-based brakes, such as disc or drum brakes. These brakes are commonly used in modern automotive vehicles and industrial applications where precise control, quick response times, and regenerative braking capabilities are required, allowing for energy recovery and improved braking performance in various operating conditions.

The major global manufacturers of Electro-mechanical Brake include Reach Machinery Group, YLA, Wulong Brake, Ogura Clutch, Altra Industrial Motion, Kendrion, KEB Automation, Mayr, Precima Magnettechnik, Ortlinghaus Group, Dunkermotoren, etc. The global players competition landscape in this report is divided into three tiers.
