### Research Summary

An electrodialysis system is a water treatment technology that utilizes selective ion-exchange membranes and an electric field to separate and remove ions from a solution. In this process, the solution passes through a series of alternating cation-selective and anion-selective membranes, while an electrical current is applied. The charged ions in the solution migrate through the appropriate ion-selective membranes, leading to the creation of concentrated and dilute streams. Electrodialysis is commonly used for desalination, demineralization, and ion removal from water sources, making it valuable in industries like desalination plants, the food and beverage industry, and wastewater treatment. Electrodialysis systems offer a cost-effective and energy-efficient solution for achieving desired water quality and ion concentrations while minimizing the use of chemicals and waste production.

The major global manufacturers of Electrodialysis System include PCCell GmbH, FuMA-Tech, Astom, AGC Engineering, Evoqua Water Technologies LLC, GE Water & Process Technologies (SUEZ), Electrosynthesis Company, Magna Imperio Systems, C-Tech
