### Research Summary

Electrofusion fittings are specialized components used in the field of thermoplastic pipe systems for applications such as water supply, gas distribution, and industrial pipelines. These fittings are designed with integrated heating elements and metal coils that, when connected to an electrofusion control unit, allow for the precise and controlled fusion of two or more thermoplastic pipes. The electrical energy applied to the fitting heats the pipe ends and the fitting itself, causing the material to melt and fuse together. This results in a secure, leak-proof, and structurally sound joint without the need for additional adhesives or mechanical fasteners. Electrofusion fittings are highly regarded for their efficiency, reliability, and ability to create durable connections, making them a popular choice for joining thermoplastic pipes in a wide range of industries.

The major global manufacturers of Electrofusion Fittings include Aliaxis, GF, Plasson, Wavin, Cangzhou Mingzhu, Radius, Geberit, Polypipe, Rehau, Chinaust, Agru, Egeplast, Nupi, Hidroten, Fusion Group, etc. The global players competition landscape in this report is divided into three tiers.
