### Research Summary

An electrohydrodynamic jet printing (EHDP) system is an advanced manufacturing technology used to deposit highly precise patterns of materials onto a substrate. It operates by applying an electric field to a liquid, which creates a fine jet that ejects droplets or continuous streams of the material onto a surface with micron or nanometer precision. EHDP systems are capable of printing a wide range of materials, including polymers, metals, and biological substances, making them useful in fields like electronics, biotechnology, and microfabrication. This method allows for the creation of intricate, high-resolution patterns and is used in applications such as flexible electronics, sensors, and biomedical devices.

The major global manufacturers of Electrohydrodynamic Jet Printing System include SIJTechnology, Enjet, Notion Systems, Wuhan Guochuangke Optoelectronic Equipment, TONG LI TECH, Shanghai Ruidu Photo-Electric Technology, Guangdong Sygole Intelligent Technology, etc. The global players competition landscape in this
