Research Summary

Electroless plating is a metallization process used to deposit a thin and uniform layer of metal onto a substrate, typically non-conductive materials like plastics, ceramics, or composites, without the need for an external electrical current. In this process, a chemical bath containing metal ions and reducing agents is used to initiate a controlled chemical reaction on the substrate's surface, resulting in the gradual reduction and deposition of a metal layer. Electroless plating offers several advantages, including uniform coating thickness, excellent adhesion, and the ability to coat complex shapes and internal surfaces, making it valuable in industries such as electronics, aerospace, and automotive for applications like corrosion protection, electrical conductivity enhancement, and decorative finishes.

The major global manufacturers of Electroless Plating include MacDermid, Atotech, Aalberts Surface Treatment, UYEMURA, Collini, Japan Kanigen, Okuno chemical industries, Coventya, TANAKA(EEJA), Q & M Enterprises, Argos SpA, KC Jones Plating Company, Thermocompact, Micron srl, PacTech, Ensoo, GS Chemistry,
