Research Summary

Electrolytic copper, also known as electrorefined copper or high-purity copper, is a high-quality copper material produced through the electrolytic refining process. In this method, impure copper is used as the anode, and a pure copper cathode is submerged in an electrolyte solution. When an electric current is applied, copper ions from the anode migrate through the solution to the cathode, where they are deposited as pure copper, effectively purifying the material. Electrolytic copper is prized for its exceptional electrical conductivity, thermal conductivity, and high chemical purity, making it a crucial material in various industries, including electronics, telecommunications, and electrical engineering, where the performance of copper is paramount for efficient and reliable applications.

The major global manufacturers of Electrolytic Copper include Jiangxi Copper, Tongling Nonferrous Metals, Yunnan Copper, Jinchuan, Daye Nonferrous Metals, Shandong Xiangguang, Henan Zhongyuan Gold Smelter, Shandong Fangyuan, ZTS Non-ferrous Metals, Baiyin Nonferrous, etc. The global players competition landscape in this report is divided into three tiers.
