Research Summary

Electromagnetic brakes are a type of braking system that utilizes electromagnetic force to control and slow down the motion of a mechanical component. They typically consist of a stationary coil and a movable armature or rotor, which can engage or disengage to create braking action. When an electric current flows through the coil, it generates a magnetic field, attracting the armature and causing it to make contact with a friction surface, effectively slowing down or stopping the rotation of the component. Electromagnetic brakes are widely used in applications where precise control, rapid engagement and disengagement, and reliability are essential, such as in industrial machinery, vehicles, and conveyor systems, offering an efficient and versatile means of deceleration and stopping without the wear associated with traditional friction brakes.

The major global manufacturers of Electromagnetic Brakes include Ogura Industrial, Altra Industrial Motion, Kendrion, KEB Automation, Mayr, Precima Magnettechnik, Miki Pulley, Dunkermotoren, OSAKI, Ortlinghaus Group, Re SpA, Cantoni Motor, Magnetic Technologies, EIDE, SUCO, Emco Dynatorq, YAN Industries, etc. The global players
