Research Summary

An electromagnetic proportional valve is a type of fluid control device used to precisely regulate the flow of a fluid, typically a gas or liquid, in proportion to the electrical input it receives. It consists of a solenoid that, when energized, generates a magnetic field, which in turn controls the position of a movable plunger or spool within the valve. By varying the strength of the electrical current, the valve can finely adjust the position of the plunger, thereby modulating the flow rate of the fluid passing through it.

Electromagnetic proportional valves are widely used in industrial applications, such as in hydraulic systems, pneumatic control, and other processes where precise and variable fluid flow control is necessary, making them invaluable for achieving accurate and responsive control in various automated and manufacturing systems.

The major global manufacturers of Electromagnetic Proportional Valve include Emerson ASCO, Kendrion, Parker, Burkert, IMI, Eaton, Nachi, Bosch Rexroth, SMC, Daikin, Nikkoshi, Humphrey, Festo, ODE, Takano, Sincere, Anshan Electromagnetic Valve,
