### Research Summary

An electromagnetic pump for liquid metal is a specialized device designed to move liquid metals, such as sodium, potassium, or mercury, without the need for mechanical components like blades or pistons. Using the principles of magnetohydrodynamics (MHD), it generates electromagnetic forces by passing an electric current through the liquid metal within a magnetic field, causing the metal to flow. These pumps are highly efficient and ideal for handling extreme conditions, such as high temperatures and corrosive environments, making them essential in applications like nuclear reactors, metallurgical processes, and space technology. Their design eliminates moving parts, reducing maintenance and the risk of contamination, while ensuring precise and reliable control of metal flow.

The major global manufacturers of Electromagnetic Pump for Liquid Metal include Precimeter Control AB, Pyrotek, CMI Novacast, Sukegawa Electric, Shijiazhuang Magnetic City Electric, Creative Engineers, Shijiazhuang IDEA, Tangshan Mainite
