### Research Summary

Electromagnetic shielding materials are substances or composites used to block or attenuate electromagnetic interference (EMI) and electromagnetic radiation (EMR) from reaching sensitive electronic devices or areas. These materials work by absorbing, reflecting, or redirecting electromagnetic waves, thus reducing their impact on electronic circuits, equipment, or living organisms. Common electromagnetic shielding materials include metals such as copper, aluminum, and steel due to their high electrical conductivity and ability to reflect electromagnetic waves. Additionally, conductive polymers, carbon-based materials like graphite or carbon fiber, and specially designed metal-coated fabrics or films are also used for electromagnetic shielding purposes. The effectiveness of electromagnetic shielding materials depends on factors such as material composition, thickness, conductivity, and the frequency range of the electromagnetic waves being blocked. These materials are crucial in industries such as telecommunications, aerospace, automotive, medical devices, and military applications where electromagnetic compatibility (EMC) and electromagnetic radiation protection are

critical considerations for operational reliability, safety, and regulatory compliance.

The major global manufacturers of Electromagnetic Shielding Material include Marian, Martek Prober, Microsorb Technologies, Mushield, Omega Shielding Products, Orion Industries, Panashield, Parker Chomerics, Premix Thermoplastics, Presscut Industries, Rtp, Sas Industries, Schaffner Emc, Schlegel Electronic Materials, Cybershield, Shieldex Trading Usa, Stockwell Elastomerics, Swift Textile Metalizing, Tech-Etch, Thrust Industries, etc. The global players competition landscape in this report is divided into three tiers.
