Research Summary

An electromagnetic therapy device is a medical or wellness apparatus that utilizes electromagnetic fields, such as pulsed electromagnetic fields (PEMF) or radiofrequency waves, to interact with the body's tissues and cells for therapeutic purposes. These devices are designed to promote healing, reduce pain, improve circulation, and enhance overall well-being by applying controlled electromagnetic energy to targeted areas of the body. They are commonly used in the management of various medical conditions, including chronic pain, musculoskeletal disorders, and wound healing, and are based on the principle that electromagnetic fields can influence biological processes at the cellular level, potentially facilitating the body's natural healing mechanisms.
