Research Summary

Electromechanical solenoid valves are devices used to control the flow of fluids, such as liquids or gases, in a mechanical system by utilizing an electromagnetic coil to actuate a movable plunger or valve mechanism. When an electrical current is applied to the coil, it generates a magnetic field that either attracts or repels the plunger, causing it to open or close a valve port, thus regulating the fluid flow. These valves are commonly employed in various applications, including irrigation systems, pneumatic and hydraulic systems, and industrial machinery, where rapid and precise fluid control is required, and they offer the advantage of being able to actuate quickly and reliably in response to electrical signals, making them an essential component for automation and control systems.

The major global manufacturers of Electromechanical Solenoid Valves include Emerson (ASCO & Sirai), Kendrion, Danfoss, Parker, B?rkert, SMC, ETO Magnetic GmbH (ETO GRUPPE), Norgren (IMI), CKD, CEME, Saginomiya, ODE, YPC, GF Piping Systems
