Research Summary

Electronic Access Control Systems are sophisticated security systems used to regulate and manage access to physical spaces, such as buildings, rooms, or secure areas. These systems employ electronic components, including card readers, keypads, biometric scanners, and electronic locking mechanisms, to authenticate and authorize individuals who seek entry. Users typically present a valid credential, such as an access card, PIN, or biometric data, which is verified against a preconfigured database. Access is then granted or denied based on the permissions associated with the presented credential. Electronic Access Control Systems offer advantages such as real-time monitoring, audit trails, and the ability to restrict and track access for different individuals at various times, making them integral to modern security and ensuring the protection of sensitive or controlled areas in commercial, industrial, and institutional settings.

The major global manufacturers of Electronic Access Control Systems include Honeywell, ASSA Abloy, SIEMENS, TYCO, BOSCH Security, DDS, ADT LLC, Dorma,
