### Research Summary

An Electronic Air Suspension System (EAS) is an advanced automotive technology that utilizes electronically controlled air springs to adjust and manage a vehicle's ride height and suspension characteristics. These systems replace traditional steel coil or leaf springs with airbags that can be inflated or deflated as needed, providing a smoother and more customizable ride experience. EAS typically relies on sensors and onboard computers to monitor various factors, such as vehicle load, road conditions, and driver preferences, to automatically adjust the air pressure in each airbag. This technology not only enhances ride comfort and stability but also allows for variable ride heights, improving ground clearance for off-road driving and lowering the vehicle for better aerodynamics and fuel efficiency at higher speeds. Electronic Air Suspension Systems are commonly found in luxury cars, SUVs, and some commercial vehicles, offering improved ride quality and handling dynamics.

The major global manufacturers of Electronic Air Suspension System (EAS) include
