### Research Summary

An electronic cigarette lithium battery, often referred to as a "vape battery," is a rechargeable power source used in electronic cigarettes or vaping devices. These batteries are typically lithium-ion or lithium-polymer cells, designed to provide the energy required for heating the heating element (coil) in the atomizer of the vaping device. Lithium batteries are favored for their high energy density, long life, and ability to deliver consistent power to create vapor from e-liquids. Users can recharge these batteries using USB or other charging mechanisms, allowing for extended use without the need for frequent replacements. Proper handling and charging practices are essential to ensure safety, as lithium batteries can be sensitive to misuse or damage, and they play a critical role in the overall functionality and safety of electronic cigarette devices.
