Research Summary

Electronic Expansion Valves (EEVs) are advanced control devices used in heating, ventilation, air conditioning, and refrigeration systems to precisely regulate the flow of refrigerant through the system. EEVs are equipped with electronic sensors and a controller that continuously monitor operating conditions and adjust the valve's opening in real-time to optimize cooling or heating efficiency. By controlling the refrigerant flow, EEVs ensure the proper superheat level within the evaporator, improving system performance, energy efficiency, and cooling capacity. These devices are commonly used in applications like air conditioning units, refrigeration systems, and heat pumps, providing precise and adaptive refrigerant control to maintain temperature and humidity levels while minimizing energy consumption and improving overall system reliability.

The major global manufacturers of Electronic Expansion Valves (EEVs) include Fujikoki, SANHUA, DunAn, Saginomiya (Danfoss Poland), Danfoss, Parker, Emerson, Castel, etc. The global players competition landscape in this report is divided into three tiers.
