Research Summary

Hexachlorodisilane (HCDS) is a chemical compound with the formula Si_2Cl_6 . It is a colorless, volatile liquid that is primarily used in the semiconductor industry as a precursor for depositing silicon-containing thin films during the manufacturing of electronic devices such as integrated circuits (ICs), solar cells, and other semiconductor components. HCDS is classified as an electronic grade material, meaning it meets stringent purity and quality standards required for semiconductor fabrication processes. It is valued for its ability to decompose cleanly at relatively low temperatures to deposit high-purity silicon dioxide (SiO_2) and silicon nitride (Si_3N_4) films via chemical vapor deposition (CVD) or atomic layer deposition (ALD) techniques. These thin films serve as insulating or passivating layers in semiconductor devices, contributing to their electrical performance, reliability, and miniaturization. Proper handling, storage, and usage protocols are essential when working with HCDS due to its reactivity and potential hazards associated with handling halogenated compounds.

The major global manufacturers of Electronic Grade Hexachlorodisilane (HCDS) include NovaKem, PSC, ProChem, Yangzhou Upkind Technologies Co., Ltd., SINOSICO, MERYER, JINJINLE CHEMICAL CO.,LTD, Hemlock, etc. The global players competition landscape in this report is divided into three tiers.
