Research Summary

Electronic Thermostatic Radiator Valves (eTRVs) are advanced devices used in heating systems to regulate the temperature of individual radiators or zones within a building. Unlike traditional thermostatic radiator valves, eTRVs are equipped with electronic components and sensors, allowing for more precise and automated temperature control. They can be connected to a central heating control system or operated remotely via a smartphone app, enabling users to set schedules and adjust heating levels to improve energy efficiency and comfort. Electronic TRVs play a crucial role in optimizing heating systems, reducing energy consumption, and enhancing the overall control and flexibility of indoor climate management in homes and commercial buildings.
