### Research Summary

Electrostatic enamel powder is a specialized coating material used in the powder coating industry for applying a durable and attractive finish to various surfaces, including metal and some plastics. This powder consists of finely ground enamel pigments and resins that are electrostatically charged. The substrate, which is grounded, attracts the charged powder particles, creating a uniform and adhesive coat on the surface. After application, the coated object is heated, causing the powder to melt and form a smooth and hard enamel finish that is resistant to chipping, corrosion, and wear. Electrostatic enamel powder coating is widely employed in various applications, from automotive parts and household appliances to architectural and industrial uses, providing a protective and visually appealing coating that is both environmentally friendly and cost-effective.

The major global manufacturers of Electrostatic Enamel Powder include Ferro, TOMATEC, COLOROBIA, KESK?N K?MYA, Prince, Enamel Frits, HAE KWANG, Hunan Noli Enamel, Sinopigment & Enamel Chemicals, Hengxin, etc. The global
