Research Summary

Emergency lighting is a crucial aspect of building safety systems, providing illumination in the event of a power outage or other emergency situations when the main lighting source fails. Typically backed up by battery power or generators, emergency lighting fixtures are strategically placed in buildings to ensure that escape routes, exit signs, and critical areas remain adequately lit during crises, such as fires, natural disasters, or power failures. The primary purpose of emergency lighting is to guide building occupants safely to exits, enabling an orderly evacuation, reducing panic, and minimizing the risk of accidents or injuries. This system ensures that essential safety measures remain in place when regular lighting is unavailable, contributing to overall emergency preparedness and helping people navigate through potentially hazardous situations.
