### Research Summary

Electronic Medical Records (EMR) and Electronic Health Records (EHR) software are digital systems used in healthcare to manage and store patient medical information. EMR software primarily focuses on the patient's clinical and treatment history within a single healthcare facility, streamlining tasks such as patient charting, diagnosis, and prescription management. On the other hand, EHR software goes beyond individual facilities and offers a more comprehensive, interoperable solution that allows healthcare providers to share patient data across different healthcare settings, enhancing care coordination and patient outcomes. Both EMR and EHR systems digitize patient records, making them accessible to authorized healthcare professionals, improving efficiency, accuracy, and patient care by providing a centralized and secure platform for managing health-related data.

The major global suppliers of EMR & EHR Software include Epic Systems, eClinicalWorks, McKesson, Allscripts Healthcare Solutions, Cerner, Athenahealth, NextGen Healthcare, Meditech, Medhost, Computer Programs and Systems, Inc
