Research Summary

An endoscope washer-disinfector is a specialized medical device designed for the automated cleaning and disinfection of endoscopes, which are intricate and delicate instruments used in various medical procedures. These machines offer a systematic and standardized process to remove organic residues, debris, and microorganisms from the endoscope's surfaces. Typically, the washer-disinfector operates by circulating a detergent solution and high-velocity water through the endoscope's channels and exterior, followed by a disinfection phase using chemical agents or thermal disinfection. By automating this critical cleaning and disinfection process, endoscope washer-disinfectors help ensure the safety and reusability of endoscopes, preventing cross-contamination, and promoting compliance with stringent hygiene standards in healthcare facilities.
