Research Summary

An endoscopic cold light source is a medical device used in endoscopy to provide illumination for viewing the internal structures of the body during minimally invasive procedures. Unlike traditional light sources that can generate heat, a cold light source emits intense, focused light without significant heat production, reducing the risk of tissue damage during extended endoscopic procedures. Typically, it comprises high-intensity light-emitting diodes (LEDs) or other light technologies, which are connected to the endoscope through fiber-optic cables to deliver bright and consistent illumination. This cold light source is crucial for ensuring clear visualization, aiding in diagnosis, and enabling precision during various endoscopic examinations and surgeries while minimizing the potential for patient discomfort or tissue injury due to heat.

The major global manufacturers of Endoscopic Cold Light Source include Olympus, Karl Storz, Stryker, Conmed, HOYA, Fujifilm, Richard Wolf, Boston Scientific, Smith & Nephew, B.
