Research Summary

An Endoscopic Submucosal Dissection (ESD) tool is a specialized medical instrument used in advanced endoscopic procedures to perform precise dissection and resection of abnormal or early-stage cancerous lesions within the gastrointestinal tract's submucosal layer. These tools include a range of instruments, such as knives, graspers, and electro-surgical devices, designed for cutting, lifting, and manipulating tissue during ESD. ESD tools are crucial for achieving en-bloc resection of larger lesions and providing better access and control compared to standard endoscopic techniques. By allowing endoscopists to work beneath the mucosal layer, ESD tools enhance the accuracy and safety of therapeutic endoscopy, reduce the need for more invasive surgeries, and enable the complete removal of lesions for further pathological evaluation, improving patient outcomes.

The major global manufacturers of Endoscopic Submucosal Dissection Tool include Olympus Corporation, Boston Scientific, ERBE Elektromedizin, FUJIFILM Medical
