### Research Summary

Endoscopic ultrasound (EUS) is a specialized medical imaging technique that combines endoscopy with high-frequency ultrasound to obtain detailed, real-time images of internal structures within the digestive tract and surrounding organs. During an EUS procedure, a thin, flexible endoscope equipped with an ultrasound transducer at its tip is inserted through the mouth or rectum to provide close-range imaging of the gastrointestinal wall, nearby lymph nodes, and adjacent structures. EUS is valuable for diagnosing and staging various conditions, such as gastrointestinal cancers, pancreatic disorders, and submucosal lesions, as it allows for precise visualization and assessment of the layers and characteristics of the tissues, aiding in treatment planning and providing valuable information for clinicians.

The major global manufacturers of Endoscopy Ultrasound include Olympus Corporation, Hitachi Medical Systems, PENTAX Medical, Fujifilm, Boston Scientific Corporation, Medtronic, Cook Medical, CONMED Corporation, Medi-Globe GmbH, Limaca Medical, etc. The global players competition landscape in this report is divided
