Research Summary

Engine oil, often referred to as motor oil, is a lubricating fluid specially formulated for internal combustion engines. It serves several critical functions in the engine, primarily providing lubrication to reduce friction and wear between moving parts, such as pistons, crankshafts, and camshafts. Additionally, engine oil helps dissipate heat generated during engine operation, prevents corrosion and rust, and seals gaps between parts to maintain compression and reduce oil consumption. Engine oil is available in various types and viscosities, with specific formulations tailored to different engine designs and performance requirements, ensuring the smooth and efficient operation of the engine while extending its lifespan and preserving overall reliability. Regular maintenance, including oil changes, is essential to ensure the engine operates at its best and remains in good working condition.

The major global manufacturers of Engine Oil include Shell, Exxon Mobil, BP, Total, Chevron Corporation, Lukoil, Sinopec Lubricant, Valvoline, CNPC, Petronas, FUCHS, SK Lubricants, etc. The global players competition landscape in this report is divided into three tiers.
