Research Summary

Engineered wooden flooring is a versatile and popular flooring option that combines the natural beauty of real wood with enhanced durability and stability. It is constructed with multiple layers of wood, typically consisting of a top layer of genuine hardwood and underlying layers of plywood or high-density fiberboard. This layered construction imparts resistance to warping and expansion caused by moisture, making engineered wood suitable for a variety of environments, including bathrooms and kitchens. The top layer can be sanded and refinished, allowing for multiple refinishing cycles over the floor's lifespan. Engineered wooden flooring offers a wide range of wood species and finishes, providing homeowners with the aesthetics of solid hardwood while offering increased resilience and adaptability to different climate conditions.
