Research Summary

Engineering plastics, including PBT (Polybutylene terephthalate), PA6 (Polyamide 6), and PA66 (Polyamide 66), are a class of synthetic polymers designed for specialized engineering applications. PBT is known for its excellent mechanical strength, electrical insulating properties, and resistance to heat, making it suitable for electrical connectors and automotive components. PA6 and PA66 are part of the polyamide family and are recognized for their high tensile strength, durability, and chemical resistance. PA6 is commonly used in consumer goods, automotive parts, and industrial components, while PA66, with enhanced heat and chemical resistance, is favored in more demanding applications, including automotive engine parts and electrical connectors. These engineering plastics offer a combination of mechanical, thermal, and electrical properties tailored to meet specific industry needs, making them essential materials for various manufacturing and engineering sectors.

The major global manufacturers of Engineering Plastics (PBT, PA6 & PA66) include
