Research Summary

Engineering plastics recycling is a process that aims to recover and reuse high-performance synthetic polymers, such as PBT, PA6, and PA66, from discarded or end-of-life products and components. It involves collecting, sorting, and processing these plastics to convert them into raw materials for the production of new engineering plastic products. Recycling engineering plastics not only conserves valuable resources and reduces waste but also helps lower the environmental impact associated with the production of virgin plastics. The process can be complex due to the diversity of engineering plastic formulations, requiring specialized techniques to sort, clean, and reprocess the materials effectively. Engineering plastics recycling plays a crucial role in promoting sustainability, reducing landfill waste, and contributing to a more circular and eco-friendly approach to plastics use in various industries.

The major global manufacturers of Engineering Plastics Recycling include Centriforce Products, Clean Tech, Euresi Plastics, EF PLASTICS, Phoenix Technologies, Foss Performance Materials, Indorama Ventures, Kronos, Kuusakoski, MBA Polymers,
